

## Antiscalant boiler advanced

### Standards

### Directions for use

The product is applied directly using a dosing pump. Dosage dependent on characteristics of water supply and, more particularly, on hardness values.

### Product specifications

o Specific weight: **1.40**

o Colour: 

o pH: 

o Packaging: **5 kg**

### Product description

Liquid product consisting of sodium phosphonates, and organic scavengers and dispersants. Its formulation is specifically intended to prevent scale and deposits on surfaces, thus avoiding heat transfer losses in boiler systems. Phosphonates also prevent iron and silica deposition. The presence of organic polymers prevents calcium salts from adhering. The product includes a powerful corrosion inhibitor to prevent the installation's metal surfaces from corroding.

### Storage

Keep tightly closed, avoiding exposure to UV rays and extreme temperatures. For more information, we recommend referring to the safety sheet.
